Required investments

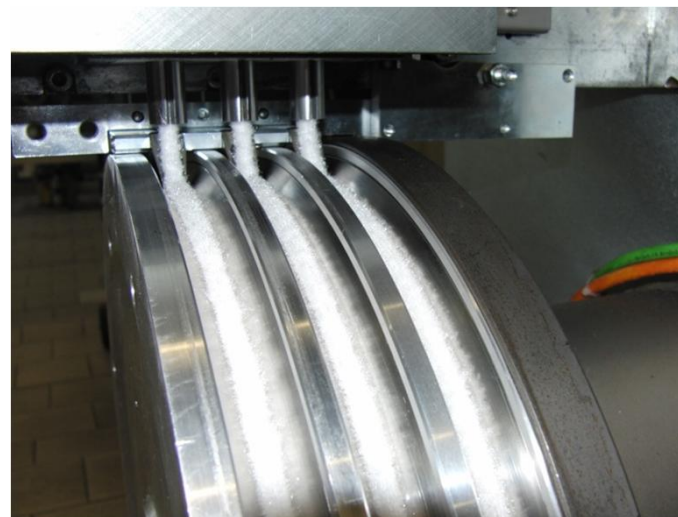

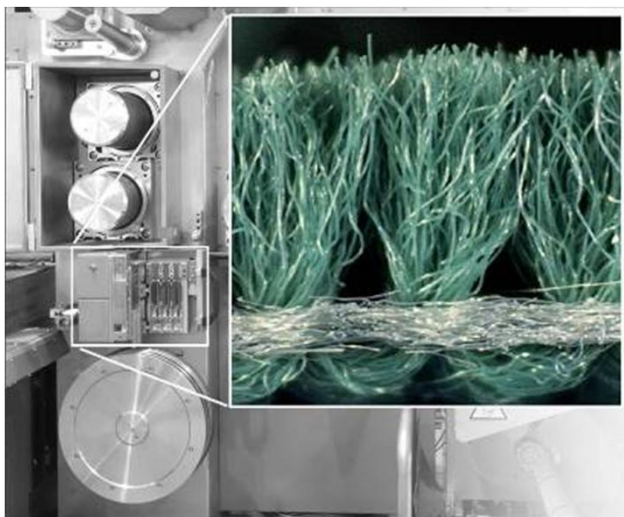

- EUR 2.5 mln

Project status

- Investor is wanted

Products

- monocolour texturized PET BCF yarns

The market of PET BCF yarns grows with a rapid pace. Yet in 1999 the world production capacity of PET BCF yarns was approximately 18 tons/year. In 2009 production capacity in the USA, which have the major share of the world PET BCF yarns production, made above 130 thousand tons/year. Experts estimate that by 2014 the world consumption of these yarns will reach 380-450 thousand tons/year.

Production and consumption of PET BCF yarns are boosted by the following factors:

- cheap PET chips are available in huge quantities, and the price of PET chips is more stable than that of PP and PA6;
- PET BCF yarns are very bulky and have good UV-stability;
- PET BCF yarns have a silky smooth touch and a very high luster, which improves quality of final products;
- PET is easy to recycle.

An additional advantage for setting up the production unit in the suggested lot is proximity to OAO Mogilevkhimvolokno that manufactures PET chips. It can supply them to a new enterprise on the preferential terms of FEZ.

There are currently no manufacturers of PET BCF yarns in CIS countries.

Advantages of projects implementation in Mogilev FEZ

MOGILEV
