

Setting up manufacture of erosion control mats from biodegradable materials

Customers

- Road-building companies
- Belarusian railway
- Companies subordinate to the Ministry of Nature of Belarus

Required investments

- USD 1.3 mln.

Project status

- Investor is wanted

Products

- Erosion control mats

The main advantages of the product are as follows:

- Erosion causing energies are absorbed while offering instant 100% soil protection. Can be installed in running water trapping sediment fines.
- Seeds and indigenous plants can establish from within and below the mats, generating the natural range of plants.
- Seeding and erosion control in a single operation.
- Mulching effect of the matting improves all-year round establishment.
- Choice between medium-term stabilization of surface root matrix or a totally biodegradable system.
- Mats can be placed manually, often concurrently with the soiling operation. They are simple to install which is valuable for complicated soil reliefs.

Erosion control mats can be used at new slope cuttings, lakesides, freshly top-soil embankments, sport fields, lining new water courses, protecting natural monuments, etc.

Advantages of projects implementation in Mogilev FEZ
